

PRESS RELEASE  
December 2009

WIREROPE WORKS INC. (Williamsport, Pa) names **SPARTAN SLING MFG INC** of Windsor, Ontario; Canada as full line distributor of American made **BETHLEHEM WIRE ROPE** products.

Wirerope Works Inc. has a long and illustrious history dating back to 1886. Over the past 100 years the company has evolved from a local wire rope mill to a fully integrated American wire and wire rope manufacturer recognized internationally for it's craftsmanship, innovation and performance.

The Bethlehem wire rope product line consists of 6 X 7 fibre core sand line as well as the basic fibre or steel core 6 X 25, 6 X 36 and 6 X 61 class wire ropes. These are the most widely used wire ropes for operating ropes and slings.

Non-rotating or spin-resistant wire ropes are available in 8 X 19, 19 X 7, SFP-19 and SFP-35 classifications. Spin-resistant wire ropes provide rotational stability to the lifted load and have less of a tendency to unlay under load. They are designed for those applications where it is impractical to use a tag line, relocate the rope dead end, increase sheave sizes, eliminate odd-part reeving and / or significantly reduce rope loading and rope fall length.

Bethlehem specialized wire ropes are available as 6-Pac, 6-Pac RV, Super-B swaged, Super-Pac, Triple-Pac and Flattened strand. These wire ropes offer increased breaking strengths. They show greatly improved resistance to fatigue, abrasion and multi-layer drum crushing. Compacted wire ropes are recommended for demanding applications.

BXL and 6-Pac-BXL are infused with a specially designed polymer to improve the fatigue and abrasion resistance of the wire rope. These plastic coated wire ropes enhance the resistance to drum crushing while extending the drum and sheave service life.

Bethlehem also manufactures wire lines for measuring well depths and lowering various electrical and measuring instruments into the well. Solid well measuring lines (wire) are available in both IPS and EIP grades. Well servicing lines (strand) are available in round (1 X 16) and die-drawn (1 X 19) design
